Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1882 edition. Excerpt: .Three dinitrobenzenes, etc. The di-substitutions of benzene are classified as follows: When the substitutions are adjacent (1.2, 1. 6), the compound is called ortho; when separated by one H (1. 3, 1. 5), meta; when separated by two H s (1. 4) para. In writing the formulas, the names are expressed by small letters: o C₆H₄Cl₂, Orthodichlorbenzene, mC₆H₄(NO₂)₂, Metadinitrobenzene, p C₆H₄ClNO₂, Parachloronitrobenzene. The tri-substitutions of benzene are named in the same manner: op C₆H₃Cl₃ is C₆H₃Cl₃ 1. 2. 4. There are also three tri-substitutions of benzene when the three entering atoms, or atomic groups, are the same: Cl Cl Cl Hd₇ ci Hd₇ ci Hc₇ h HC 00l HC CH ClC CCl V V H Cl H (1 0l (1 0l (1 0l or: 1) C₆H₃ i 2 0l, 2) C₈H₃ 2 Cl, 3) C₆H₃ i 3 0l. (3 01 (4 01 (5 01 1. 2. 5 is the same as 1. 2. 4, and 1. 2. 6 = 1. 2. 3. If the substituting atoms or groups are different, the number of isomers is much greater. If two of them are different, there will be six isomers; if all three are different, there will be ten isomers. The number of isomers of tetra-substitutions, when all the atoms or groups are the same, is the same as in the case of di-substitutions. If the substituting elements, or groups, differ among themselves, the number of isomers will be greater than in the...
