But the understanding of the structure and nature of the liquid substance relative to the solid and gaseous superficial much liquid field in recent years. however. made a lot of stage achievements to further explore the structural nature of the liquid substance theoretically provide a the rich phenomenological basis. By various diffraction techniques and computer simulations reveal all the topological and chemical short greatly enriched the physical meaning of the liquid structure of short-range order. Direct experimental evidence of pressure-induced non-continuous liquid - liquid structure transition break the traditional concept of a continuous gradient of liquid structure; structural change of the the alloy temperature-induced liquid-liquid found to fill the blank of high temperature above the liquidus TL liquid structure. and will solidified microscopic understanding of the mechanisms and the development and processing of materials will have a profound impact. However. the temperature-induced liquid structural change the universality (range. conditions and rules) and its essence is not clear; In addition. although the temperature treatment of melt superheating and thermal rate treatment process for changing the solidification organizations to study the contents of the solid-liquid structural dependencies are not uncommon. but the temperature-induced liquid-liquid structural changes affect the...
